Access to Water

The first component of the project will enhance access to the beach and boat launch through improving travel corridors, providing a firm and smooth route over the beach sand and removing barriers getting into and out of a kayak. This will be completed through:

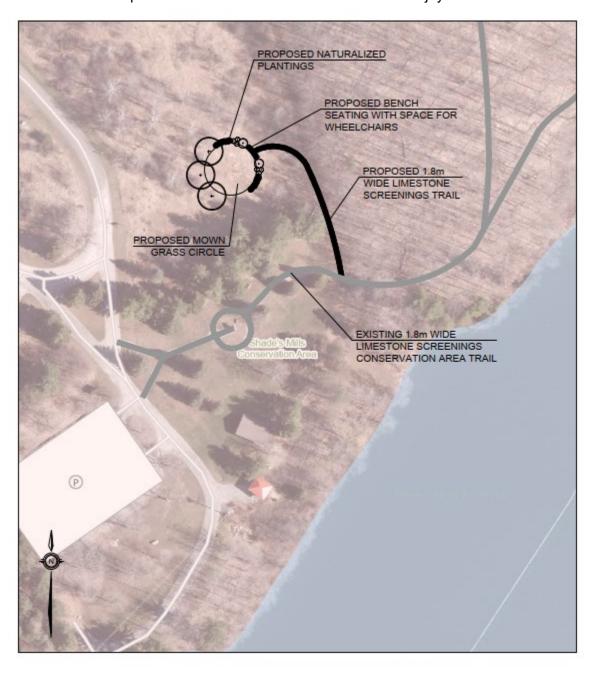

- 1. Installing an accessible beach mat
- 2. Purchasing a floating beach wheelchair
- 3. Purchasing an accessible all-terrain wheelchair
- 4. Installing an accessible dock and kayak launch
- 5. Upgrades to the existing wilderness trails that connect the parking lot, beach and boat launch

Meditation Grove - Sensory Area

The second portion of the project will implement a Meditation Grove for visitors with sensory sensitivities. This is a designated quiet, low-stimulus area with limited visual and auditory distractions. A new off-shoot section of the Woodlands Trail will be developed, and a circular area will be mowed and maintained regularly by Conservation Area staff. Native shrubs and trees will surround the perimeter and a pollinator garden will be established. Benches and/or picnic tables will be available for visitors to enjoy the area.
